

Shelter Alternatives and Energy Check is a design-build team embracing building science with creativity and intention since 1988. Whole house remodels are our specialty, and we have designed and built many award winning homes, including the highest performance home certified by EarthCraft in Virginia last year. We are one of very few providers of audits and energy code inspections in rural and suburban southwestern Virginia. We provide whole home assessments to our clients, we offer retrofit services to homeowners, and we perform energy code inspections for other builders.
