

WEATHERIZATION TECHNICIAN

Stamford, CT

Job Overview

Weatherization Technician provides weatherization improvements to make building structures more energy efficient. Improvements will include installing blown-in cellulose insulation, air sealing, etc. The position is also responsible for completing installation work on homes including vapor barriers, drywall repairs and carpentry. The Weatherization Technician will work side by side with the other team members to efficiently and effectively complete all project duties. Technicians will be required to ensure compliance with Industry Standards and OSHA and other safety work practices while working.

Experience

Basic construction experience necessary. Knowledge of building science a plus but willing to train.

Compensation

Salary based on experience. Full time positions available. Medical, dental and vision. 401k with company matching plans.

Education

High School Diploma and BPI Building Analyst & Envelope Certification Preferred

About New England Total Energy

Since 1939, the Cortese family has been providing customers with outstanding service and competitive pricing. New England Total Energy has evolved throughout the years into a total home energy company that offers our customers energy assessments, as well as a variety of products and services that include heating oil, propane, diesel and natural gas in both homes and businesses. Residentially and commercially, we sell and service boilers, furnaces, central air conditioning systems and hot water heaters.
