

Learn About BPI

What is BPI? Why Should I Get Involved?

BPI Certified Professionals solve home and building owners' trickiest problems. BPI offers certifications, standards, and programs (BPI GoldStar Contractor). BPI helps you develop your professional proficiencies and shape, or nurture, your career. For business owners, BPI enhances your offerings to meet the real needs of homeowners. BPI is the source for certified contractors working on home energy efficiency, comfort, durability, health, and safety.

What is Home Performance?

Home performance is taking an integrated approach to how the home's or building's systems can work together to provide the most comfortable and efficient living space. (ENERGY STAR, 2017).

What If I Am Brand New to This Industry? Where Do I Start?

Great! Welcome to one of the best industries you could join today. First, please check out this site to learn about what BPI offers. Then, we would suggest considering the Building Science Principles (BSP) certificate. The BSP will give you the baseline knowledge you need to pursue a BPI certification.

What If I Already Have Some Home/Building Knowledge and Experience?

The Building Analyst Technician certificate is ideal if you have some experience and want to gain a deeper understanding of building science. The BSP is a prerequisite for this certificate, which prepares you to conduct data collection and diagnostic testing. From there, you may progress to the Building Analyst Professional, which includes data analysis and work scope development.

Who Gets BPI Certifications?

- Building scientists
- Building trainers
- Energy auditors
- Green building professionals
- Home contractors
- HVAC specialists
- Weatherization (WAP) contractors
- And many others!

What Makes BPI Certified Professionals Different from Other Contractors?

Through our standards, BPI sets the bar for home performance contractors. BPI Certified Professionals have the following in common:

- They have home health, safety, durability, energy efficiency, and comfort always in the forefront of their minds, and their work.
- They maintain their certifications by getting continuing education. Few other types of contractors have this requirement.
- They are the best in the business and they know it. That's why BPI Certified Professionals, and BPI GoldStar Contractors (companies), hire other BPI Certified Professionals.

What Will Be My Return on Investment (ROI)?

Career Advancement and Employment: Professionals who get BPI certified are committed to the home performance industry. They invest in themselves, and in others, with BPI certifications.

In 2016 E4TheFuture published the Home Energy Industry Survey, conducted by Arcadia Consulting. Survey respondents included home performance and home energy sector professionals from around the country. They rated BPI highly for brand familiarity, career advancement, and value.
