

Our rapidly growing firm is seeking an experienced energy auditor to perform QC inspections, audits, and to coordinate with insulation contractors.

Responsible for conducting energy audits, quality control, and post inspections of weatherization and heating system work performed in residences of clients. Schedule appointments with eligible clients for pre- and post- inspections of weatherization. Conduct energy audits and surveys which would include identification of existing air infiltration conditions, measurements of attic and wall areas, testing of heating equipment, etc. to determine the kinds of conservation improvements required. Coordinate inspections in compliance with installation guidelines. Monitor work in progress by subcontractors to determine that work performance and materials used conform with accepted standards as required by the funding source. Provide energy conservation training through demonstrations and written materials to clients as required by program and state guidelines. Perform other related duties as assigned from time to time.
